

SORTING AND RECYCLING OF WASTE MATERIALS PGS. 90-

93. *NB: this section continues from week2- worksheet 1.

Waste sorting is the process by which **waste** is separated into different categories. **Waste sorting** can occur manually at the home and collected through municipal collection, or automatically separated in **materials** recovery facilities or mechanical biological treatment systems.

Every person has the responsibility of disposing of waste correctly.

1. How can this be done?
2. What are some of the items that you can recycle?
3. Does your family recycle and what do they do with household waste?
4. What is organic waste?
5. Do you have a compost heap at home or have you seen one? Describe it here.
